

With an electrical automatic door closer, you open the door to a quality of life for your residents

Not just Fire Rated but highly rated !

Fire rated doors can be heavy and hard to open for the elderly and frail, and in many situations it is desirable to have doors open for supervision or community reasons.

Redmen's electrical automatic door closers permit this freedom whilst ensuring the safety of residents.

About the system:

- Door self-opens at the push of a button
- Has an integrated electromagnetic hold open mechanism

- When connected to the building fire panel, each unit can be set to either 'hold-open' or 'swing-free' operation
- The power of the closer can be temporarily disabled to allow free passage. When deactivated the electromagnet disengages and the door closer closes the door in the normal manner to maintain fire safety
- Can be retrofitted, and is **fully compliant to Building Code**

Talk to Redmen today to discover how easily and inexpensively this system can be installed providing ease of access, peace of mind and quality of life.
